1 Abstract

The current version is targeting mainly the commandline usage with first simple GUI extensions based on the utility **zenity**. Zenity is part of the Gnome desktop but applicable to KDE as well. The advantage over **kdesktop** is the support for columns, which is required for graphical starters.

The implementation of a native graphical user interfaces for multiple desktops is going to be provided within next versions.

Thus for now the Gnome description should be used for KDE too. The provided tool **ctys-xdg** could be used for KDE with the option **-force**.
